

DL/411 Directory Assistance

DL/411 is a multiple source telephone database containing the most recent identifiable "adds" and "deletes" of the Regional Bell Operating Companies (RBOCs).

DL/411 is a time and labor saving option that enables the Infolure user to tap these RBOC resources seamlessly and cost effectively.

Updated daily, these databases provide the most current and accurate directory assistance available – just like 411 services, but faster and far less expensive. Contact phone numbers can be verified or retrieved for virtually any consumer household, except for those whose phone numbers are unlisted.

Infolure's batch service processes in less than 24 hours and usually with as little as 4 hour turn times.

Our proprietary LATITUDE scored matching technology supports DL/411 and hence, the user benefits from more dependable matching than the industry norm.

The DL/411 output returns the original input record, the area code of each RBOC search, and a matched telephone number if one is found.

For records with an unsatisfactory match from other phone sources, DL/411 is the database of choice for virtually up-to-the-minute changes in phone numbers.
